Coronavirus Disease 2019 (COVID-19)

En Español: Para obtener información en español, visite nuestra página de el Novedoso Coronavirus 2019 (COVID-19).

California is issuing daily updates on COVID-19. See the most recent update on the CDPH News Release page.

California is responding to the spread of a respiratory illness caused by a novel coronavirus (COVID-19) first identified in Wuhan, Hubei Province, China. Cases of COVID-19 are also being reported internationally and in the United States. California is actively working with the White

House, Centers for Disease Control and Prevention (CDC), local governments, health facilities, and health care providers across the state to prepare and protect Californians from COVID-19.

COVID-19 in California by the Numbers:

As of March 14, 2020, 6 p.m. Pacific Daylight Time, there are a total of 335 positive cases and six deaths in California (including one non-California resident). This total does not include passengers from the Grand Princess cruise ship currently docked in Oakland.

Ages of all confirmed positive cases:

- Age 0-17: 6 cases
- Age 18-64: 210 cases
- Age 65+: 116 cases
- Unknown: 3 cases

24 – Cases of positive tests related to federal repatriation flights

311 – Cases not related to repatriation flights

- 70 – Travel related
- 68 – Person-to-person acquired
- 82 – Community acquired
- 91 – Under investigation

Approximately 11,700 people are self-monitoring, across 49 local health jurisdictions, after returning to the U.S. from travel.

The following local health jurisdictions are currently reporting community transmission:

- Alameda

- Contra Costa
- City of Long Beach
- Orange
- Riverside
- Sacramento
- San Diego
- San Francisco
- San Joaquin
- San Mateo
- Santa Clara
- Santa Cruz
- Solano
- Stanislaus
- Tulare
- Ventura
- Yolo

Nineteen public health labs in California are testing for COVID-19. These labs include the California Department of Public Health's Laboratory in Richmond, Alameda, Contra Costa, Humboldt, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Sacramento, San Bernardino, San Diego, San Francisco, San Joaquin, San Luis Obispo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. More public health labs will soon be able to test for COVID-19. This means California public health officials will get test results sooner, so that patients will get the best care.

How can people protect themselves?

There is currently no vaccine to prevent COVID-19. The best way to prevent illness is to avoid being exposed to this virus. The virus is thought to spread mainly from person-to-person between people who are in close contact with one another (within about 6 feet). This occurs through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs. Older adults and people who have severe underlying chronic medical conditions like heart or lung disease or diabetes seem to be at higher risk for developing more serious complications from COVID-19 illness. Every person has a role to play. So much of protecting yourself and your family comes down to common sense:

- Washing hands with soap and water.
- Clean and disinfect frequently touched surfaces daily. If surfaces are dirty, clean them using detergent or soap and water prior to disinfection.
- Avoiding touching eyes, nose or mouth with unwashed hands.
- Cover your cough or sneeze with a tissue or your elbow.
- Avoiding close contact with people who are sick.
- Staying away from work, school or other people if you become sick with respiratory symptoms like fever and cough.

- Following guidance from public health officials.

Please consult with your health care provider about additional steps you may be able to take to protect yourself.

Who is at Higher Risk for Serious Illness from COVID-19?

Early information out of China, where COVID-19 first started, shows that some people are at higher risk of getting very sick from this illness. This includes:

- Older adults
- Individuals with compromised immune systems
- Individuals who have serious chronic medical conditions like:
 - Heart disease
 - Diabetes
 - Lung disease

If you are at higher risk for serious illness from COVID-19 because of your age or health condition, it is important for you to take actions to reduce your risk of getting sick with the disease, including:

- Wash your hands often with soap and water for at least 20 seconds, especially after blowing your nose, coughing, or sneezing, or having been in a public place.
- Avoiding touching eyes, nose or mouth with unwashed hands.
- Avoid close contact with people who are sick, and stay away from large gatherings and crowds.

- Stay home as much as possible. Consider ways of getting food brought to your house through family, social, or commercial networks.

It is also important that you listen to public health officials who may recommend community actions to reduce potential exposure to COVID-19, especially if COVID-19 is spreading in your community.

For more information visit the CDC's website.

What should you do if you think you're sick?

Call ahead: If you are experiencing symptoms of COVID-19, and may have had contact with a person with COVID-19 or recently traveled to countries with apparent community spread, call your health care provider or local public health department first before seeking medical care so that appropriate precautions can be taken.

What is Novel Coronavirus (COVID-19)?

Coronaviruses are a large group of viruses that are common among animals and humans. This novel coronavirus that causes COVID-19 is a newly discovered coronavirus that has not been previously detected in animals or humans. The source of this virus is not yet known.

What are the symptoms of COVID-19?

Typically, human coronaviruses cause mild-to-moderate respiratory illness. Symptoms are very similar to the flu, including:

- Fever
- Cough
- Shortness of breath

COVID-19 can cause more severe respiratory illness.

What is the treatment for COVID-19?

From the international data we have, of those who have tested positive for COVID-19, approximately 80 percent do not exhibit symptoms that would require hospitalization. For patients who are more severely ill, hospitals can provide supportive care. We are continuing to learn more about this novel coronavirus and treatment may change over time.

How is it decided whether a person with a confirmed case of COVID-19 can self-isolate at home or must be confined to a hospital or elsewhere?

Local health departments are working in partnership with the California Department of Public Health and the CDC, and making determinations on whether a person ill with COVID-19 requires hospitalization or if home isolation is appropriate. That decision may be based on multiple factors including severity of illness, need for testing, and appropriateness of home for isolation purposes.

What is the difference between COVID-19 and other coronaviruses?

Coronaviruses are a large family of viruses. There are some coronaviruses that commonly circulate in humans. These viruses cause mild to moderate respiratory illness, although rarely they can cause severe disease. COVID-19 is closely related to two other animal coronaviruses that have caused outbreaks in people—the SARS coronavirus and the MERS (middle east respiratory syndrome) coronavirus.

Is California able to test for COVID-19?

Eighteen public health labs in California are testing for COVID-19. These labs include the California Department of Public Health's Laboratory in Richmond, Alameda, Contra Costa, Humboldt, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Sacramento, San Bernardino, San Diego, San Francisco, San Luis Obispo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. More public health labs will soon be able to test for COVID-19. This means California public health officials will get test results sooner, so that patients will get the best care.

Should public events be cancelled?

The California Department of Public Health has determined that gatherings should be postponed or canceled across the state until at least the end of March. Non-essential gatherings must be limited to no more than 250 people, while smaller events can proceed only if the organizers can implement social distancing of 6 feet per person. Gatherings of individuals who are at higher risk for severe illness from COVID-19 should be limited to no more than 10 people, while also following social distancing guidelines.

The updated PDF guidance is available.

What is Social Distancing?

Social distancing is a practice recommended by public health officials to stop or slow down the spread of contagious diseases. It requires the creation of physical space between individuals who may spread certain infectious diseases. The key is to minimize the number of gatherings as much as possible and to achieve space between individuals when events or activities cannot be modified, postponed, or canceled. Although the Department of Public Health expects most events with more than 250 attendees to be postponed or canceled, we emphasize that the venue space does matter. Achieving space between individuals of approximately six feet is advisable. Additionally, there is a particular focus on creating space between individuals

who have come together on a one-time or rare basis and who have very different travel patterns such as those coming from multiple countries, states or counties.

Should I wear a mask?

The California Department of Public Health, along with the CDC, does not recommend that healthy people wear masks at this time. However, masks are recommended to limit the spread of disease for people who are exhibiting respiratory symptoms.

What if I have symptoms?

Patient: If a person develops symptoms of COVID-19 including fever, cough or shortness of breath, and has reason to believe they may have been exposed, they should call their health care provider or local health department before seeking care. Contacting them in advance will make sure that people can get the care they need without putting others at risk. Please be sure to tell your health care provider about your travel history. You can also take the following precautionary measures: avoid contact with sick individuals, wash hands often with soap and warm water for at least 20 seconds.

Health Care Provider: Patients who may have infection with this novel coronavirus should wear a surgical mask and be placed in an airborne infection isolation room. If an airborne infection isolation room is not

available, the patient should be placed in a private room with the door closed. Health care providers should use standard, contact and airborne precautions and use eye protection. Please see "Update and Interim Guidance on Outbreak of 2019 Novel Coronavirus (2019-nCoV) in Wuhan, China" for more information about infection control. The Public Health Department will issue All Facility Letters to regulated healthcare facilities within California with updated information and guidance; these can be found on the AFL webpage.

What should I do if I am unable to work after being exposed to COVID-19?

Individuals who are unable to work due to having or being exposed to COVID-19 (certified by a medical professional) can file a Disability Insurance (DI) claim.

Disability Insurance provides short-term benefit payments to eligible workers who have full or partial loss of wages due to a non-work-related illness, injury, or pregnancy. Benefit amounts are approximately 60-70 percent of wages (depending on income) and range from \$50 - \$1,300 a week.

Californians who are unable to work because they are caring for an ill or quarantined family member with COVID-19 (certified by a medical professional) can file a Paid Family Leave (PFL) claim.

Paid Family Leave provides up to six weeks of benefit payments to eligible workers who have a full or partial loss of wages because they need time off work to care for a seriously ill family member or to bond with a new child. Benefit amounts are approximately 60-70 percent of wages (depending on income) and range from \$50-\$1,300 a week.

For more information related to resources for California's Employers and Workers, please visit this Labor and Workforce Development Agency webpage.

What is the state doing to protect our health?

California has been actively and extensively planning with our local public health and health care delivery systems. Here are some of the things we are already doing:

- As in any public health event, the California Department of Public Health's Medical and Health Coordination Center has been activated and is coordinating public health response efforts across the state.
- California continues to prepare and respond in coordination with federal and local partners, hospitals and physicians.
- Governor Newsom declared a State of Emergency to make additional resources available, formalize emergency actions already underway across multiple state agencies and

departments, and help the state prepare for broader spread of COVID-19.

- Governor Gavin Newsom requested the Legislature make up to \$20 million available for state government to respond to the spread of COVID-19.
- California activated the State Operations Center to its highest level to coordinate response efforts across the state.
- 24 million more Californians are now eligible for free medically necessary COVID-19 testing.
- California made available some of its emergency planning reserves of 21 million N95 filtering face piece masks for use in certain health care settings to ease shortages of personal protective equipment.
- The Public Health Department is providing information, guidance documents, and technical support to local health departments, health care facilities, providers, schools, universities, colleges, and childcare facilities across California
- The California Employee Development Department (EDD) is encouraging individuals who are unable to work due to exposure to COVID-19 to file a Disability Insurance claim.
- EDD is also encouraging employers who are experiencing a slowdown in their businesses or services as a result of the Coronavirus impact on the economy to apply for an Unemployment Insurance work sharing program.

- California worked in partnership with the federal government to aid in the safe return of 962 Californians from the Grand Princess cruise ship. This mission centered around protecting the health of the passengers, and ensuring that when the passengers disembarked, the public health of the United States, the State of California, and partner communities was protected.
- The Public Health Department is coordinating with federal authorities and local health departments that have implemented screening, monitoring and, in some cases quarantine of returning travelers.
- In coordination with the CDC, state and local health departments, we are actively responding to cases of COVID-19.
- The Public Health Department is supporting hospitals and local public health laboratories in the collection of specimens and testing for COVID-19.

Eighteen public health labs in California, including the Department of Public Health's state laboratory in Richmond, are now testing for the virus that causes COVID-19.

More Information

Guidance and Information: A complete list of guidance is available.

Public: For more information on COVID-19, please visit the Centers for Disease Control and Prevention's website.

Media: If you are with a media outlet and have questions for the California Department of Public Health, please email CDPHPressOPA@cdph.ca.gov.
